Challenge-4

Daniel Tan

2023-09-04

Questions

Load the "CommQuest2023.csv" dataset using the `read_csv()` command and assign it to a variable named "comm_data."

```
# Enter code here
library(tidyverse)
```

```
## Warning: package 'tidyverse' was built under R version 4.2.3

```

Question-1: Communication Chronicles Using the select command, create a new dataframe containing only the "date," "channel," and "message" columns from the "comm_data" dataset.

Solution:

```
# Enter code here
comm_data%>%
  select(date,channel,message)
```

```
## # A tibble: 1,000 x 3
##    date       channel message
##    <date>     <chr>   <chr>
```

```
##  1 2023-08-11 Twitter Fun weekend!
##  2 2023-08-11 Email   Hello everyone!
##  3 2023-08-11 Slack   Hello everyone!
##  4 2023-08-18 Email   Fun weekend!
##  5 2023-08-14 Slack   Need assistance
##  6 2023-08-04 Email   Need assistance
##  7 2023-08-10 Twitter Hello everyone!
##  8 2023-08-04 Slack   Hello everyone!
##  9 2023-08-20 Email   Team meeting
## 10 2023-08-09 Slack   Hello everyone!
## # i 990 more rows
```

Question-2: Channel Selection Use the filter command to create a new dataframe that includes messages sent through the "Twitter" channel on August 2nd.

Solution:

```
# Enter code here
comm_data%>%
  filter(
    channel == "Twitter",
    date == "2023-08-02"
  ) %>%
  select(date,channel,message)
```

```
## # A tibble: 15 x 3
##    date       channel message
##    <date>     <chr>   <chr>
##  1 2023-08-02 Twitter Team meeting
##  2 2023-08-02 Twitter Exciting news!
##  3 2023-08-02 Twitter Exciting news!
##  4 2023-08-02 Twitter Exciting news!
##  5 2023-08-02 Twitter Exciting news!
##  6 2023-08-02 Twitter Team meeting
##  7 2023-08-02 Twitter Great work!
##  8 2023-08-02 Twitter Hello everyone!
##  9 2023-08-02 Twitter Hello everyone!
## 10 2023-08-02 Twitter Need assistance
## 11 2023-08-02 Twitter Need assistance
## 12 2023-08-02 Twitter Need assistance
## 13 2023-08-02 Twitter Exciting news!
## 14 2023-08-02 Twitter Need assistance
## 15 2023-08-02 Twitter Need assistance
```

Question-3: Chronological Order Utilizing the arrange command, arrange the "comm_data" dataframe in ascending order based on the "date" column.

Solution:

```
# Enter code here
comm_data%>%
  arrange(date)
```

```
## # A tibble: 1,000 x 5
##    date       channel sender        message         sentiment
##    <date>     <chr>   <chr>         <chr>               <dbl>
##  1 2023-08-01 Twitter alice@example Need assistance     0.677
##  2 2023-08-01 Twitter @bob_tweets   Need assistance     0.148
##  3 2023-08-01 Twitter @frank_chat   Need assistance     0.599
##  4 2023-08-01 Twitter @frank_chat   Exciting news!     -0.823
##  5 2023-08-01 Slack   @frank_chat   Team meeting       -0.202
##  6 2023-08-01 Slack   @bob_tweets   Exciting news!      0.146
##  7 2023-08-01 Slack   @erin_tweets  Great work!         0.244
##  8 2023-08-01 Twitter @frank_chat   Team meeting       -0.526
##  9 2023-08-01 Twitter @frank_chat   Exciting news!     -0.399
## 10 2023-08-01 Slack   @frank_chat   Need assistance     0.602
## # i 990 more rows
```

Question-4: Distinct Discovery Apply the distinct command to find the unique senders in the "comm_data" dataframe.

Solution:

```
# Enter code here
unique_senders <- distinct(comm_data, sender)
```

Question-5: Sender Stats Employ the count and group_by commands to generate a summary table that shows the count of messages sent by each sender in the "comm_data" dataframe.

Solution:

```
# Enter code here
comm_data%>%
  group_by(sender) %>%
  summarise(count=n())
```

```
## # A tibble: 6 x 2
##   sender        count
##   <chr>         <int>
## 1 @bob_tweets     179
## 2 @erin_tweets    171
## 3 @frank_chat     174
## 4 alice@example   180
## 5 carol_slack     141
## 6 dave@example    155
```

Question-6: Channel Chatter Insights Using the group_by and count commands, create a summary table that displays the count of messages sent through each communication channel in the "comm_data" dataframe.

Solution:

```
# Enter code here
comm_data%>%
  group_by(channel) %>%
  summarise(count=n())
```

```
## # A tibble: 3 x 2
##   channel count
##   <chr>   <int>
## 1 Email     331
## 2 Slack     320
## 3 Twitter   349
```

Question-7: Positive Pioneers Utilize the filter, select, and arrange commands to identify the top three senders with the highest average positive sentiment scores. Display their usernames and corresponding sentiment averages.

Solution:

```
# Enter code here
comm_data%>%
  group_by(sender) %>%
  summarise(mean_sentiment=mean(sentiment))%>%
  filter(mean_sentiment>0)%>%
  arrange(desc(mean_sentiment))
```

```
## # A tibble: 3 x 2
##   sender        mean_sentiment
##   <chr>                  <dbl>
## 1 carol_slack          0.118
## 2 alice@example        0.0570
## 3 dave@example         0.00687
```

Question-8: Message Mood Over Time With the group_by, summarise, and arrange commands, calculate the average sentiment score for each day in the "comm_data" dataframe.

Solution:

```
# Enter code here
comm_data%>%
  group_by(date)%>%
  summarise(mean_sentiment=mean(sentiment))
```

```
## # A tibble: 20 x 2
##    date       mean_sentiment
##    <date>              <dbl>
##  1 2023-08-01        -0.0616
##  2 2023-08-02         0.136
##  3 2023-08-03         0.107
##  4 2023-08-04        -0.0510
##  5 2023-08-05         0.193
##  6 2023-08-06        -0.0144
##  7 2023-08-07         0.0364
##  8 2023-08-08         0.0666
##  9 2023-08-09         0.0997
## 10 2023-08-10        -0.0254
## 11 2023-08-11        -0.0340
## 12 2023-08-12         0.0668
## 13 2023-08-13        -0.0604
```

```
## 14 2023-08-14        -0.0692
## 15 2023-08-15         0.0617
## 16 2023-08-16        -0.0220
## 17 2023-08-17        -0.0191
## 18 2023-08-18        -0.0760
## 19 2023-08-19         0.0551
## 20 2023-08-20         0.0608
```

Question-9: Selective Sentiments Use the filter and select commands to extract messages with a negative sentiment score (less than 0) and create a new dataframe.

Solution:

```
# Enter code here
comm_data%>%
  filter(
    sentiment < 0
  )
```

```
## # A tibble: 487 x 5
##    date       channel sender        message         sentiment
##    <date>     <chr>   <chr>         <chr>               <dbl>
##  1 2023-08-11 Slack   @frank_chat   Hello everyone!    -0.143
##  2 2023-08-04 Email   @erin_tweets  Need assistance    -0.108
##  3 2023-08-10 Twitter @frank_chat   Hello everyone!    -0.741
##  4 2023-08-04 Slack   alice@example Hello everyone!    -0.188
##  5 2023-08-09 Slack   @erin_tweets  Hello everyone!    -0.933
##  6 2023-08-08 Slack   @erin_tweets  Need assistance    -0.879
##  7 2023-08-11 Twitter @bob_tweets   Great work!        -0.752
##  8 2023-08-12 Twitter dave@example  Team meeting       -0.787
##  9 2023-08-04 Email   @bob_tweets   Fun weekend!       -0.539
## 10 2023-08-16 Twitter @bob_tweets   Exciting news!     -0.142
## # i 477 more rows
```

Question-10: Enhancing Engagement Apply the mutate command to add a new column to the "comm_data" dataframe, representing a sentiment label: "Positive," "Neutral," or "Negative," based on the sentiment score.

Solution:

```
# Enter code here
comm_data %>%
  mutate(sentiment_label = ifelse(sentiment > 0, "Positive",
                   ifelse(sentiment == 0, "Neutral", "Negative")))
```

```
## # A tibble: 1,000 x 6
##    date       channel sender        message         sentiment sentiment_label
##    <date>     <chr>   <chr>         <chr>               <dbl> <chr>
##  1 2023-08-11 Twitter dave@example  Fun weekend!        0.824 Positive
##  2 2023-08-11 Email   @bob_tweets   Hello everyone!     0.662 Positive
##  3 2023-08-11 Slack   @frank_chat   Hello everyone!    -0.143 Negative
##  4 2023-08-18 Email   @frank_chat   Fun weekend!        0.380 Positive
##  5 2023-08-14 Slack   @frank_chat   Need assistance     0.188 Positive
```

```
##  6 2023-08-04 Email   @erin_tweets  Need assistance    -0.108 Negative
##  7 2023-08-10 Twitter @frank_chat   Hello everyone!    -0.741 Negative
##  8 2023-08-04 Slack   alice@example Hello everyone!    -0.188 Negative
##  9 2023-08-20 Email   dave@example  Team meeting        0.618 Positive
## 10 2023-08-09 Slack   @erin_tweets  Hello everyone!    -0.933 Negative
## # i 990 more rows
```

Question-11: Message Impact Create a new dataframe using the mutate and arrange commands that calculates the product of the sentiment score and the length of each message. Arrange the results in descending order.

Solution:

```
# Enter code here
comm_data%>%
  mutate(sentiment_product = sentiment * nchar(message)) %>%
  arrange(desc(sentiment_product))
```

```
## # A tibble: 1,000 x 6
##    date       channel sender       message         sentiment sentiment_product
##    <date>     <chr>   <chr>        <chr>               <dbl>             <dbl>
##  1 2023-08-16 Email   @frank_chat  Hello everyone!     0.998              15.0
##  2 2023-08-14 Slack   @erin_tweets Hello everyone!     0.988              14.8
##  3 2023-08-18 Email   dave@example Hello everyone!     0.978              14.7
##  4 2023-08-17 Email   dave@example Hello everyone!     0.977              14.7
##  5 2023-08-07 Slack   carol_slack  Hello everyone!     0.973              14.6

## # i 990 more rows
```

Question-12: Daily Message Challenge Use the group_by, summarise, and arrange commands to find the day with the highest total number of characters sent across all messages in the "comm_data" dataframe.

Solution:

```
# Enter code here
comm_data%>%
  group_by(date)%>%
  summarise(total_char=sum(nchar(message)))%>%
  arrange(desc(total_char))
```

```
## # A tibble: 20 x 2
##    date       total_char
##    <date>          <int>
##  1 2023-08-10        875
##  2 2023-08-14        850
##  3 2023-08-07        790
##  4 2023-08-12        764
##  5 2023-08-18        743
##  6 2023-08-15        694
```

```
##  7 2023-08-13        680
##  8 2023-08-08        679
##  9 2023-08-20        669
## 10 2023-08-16        659
## 11 2023-08-06        643

## 17 2023-08-05        584
## 18 2023-08-09        568
## 19 2023-08-17        561
## 20 2023-08-02        422
```

Question-13: Untidy data Can you list at least two reasons why the dataset illustrated in slide 10 is non-tidy? How can it be made Tidy?

Solution: *The dataset contains hierarchical data structures, where data is organized in a way that doesn't easily fit the tidy data principles of one variable per column and one observation per row. The variables are also in rows instead of columns. You may need to perform data preprocessing steps, such as data cleaning, reshaping, and restructuring, to transform it into a format that conforms to the principles of tidy data. Each variable forms a column. Each observation forms a row. Each type of observational unit forms a table. You might need to use tools like R or Python with packages such as tidyr or pandas to restructure the dataset to fit these principles.*
